

Simplified floor plan of the future home for Suspended Animation.

Green walls indicate new construction. Black walls indicate existing construction.

An upper floor consisting of 2,000 square feet (undivided) is located above the offices on the ground floor. Handicapped access regulations prevent the upper floor from being used for offices, labs, or meeting areas, but it may be used as a clean environment for storing all materials for standby kits.

The warehouse space on the ground floor will be used for storage of raw materials and fabrication of prototypes.

Projected move-in date:  
June 18, 2005.

This plan was drafted in December 2004 and may not include detail changes made since then to comply with zoning and building regulations.
